

INTERACTIVE, MENU-DRIVEN INTERFACE TO DATABASE

5

Abstract of the Disclosure

An interactive, menu-driven interface to a cellular site information database is disclosed. The user may enter a form name such as channel, cell, trkgrp, trkmem, etc. into a form selection screen. The user may enter the operation desired to be performed on the form such as review, delete, insert, update, etc. to choose which form to view. After the user has entered the form name and the operation desired into the interface, the entered form is displayed to the user. A query, such as a SQL query, is issued to populate the fields of the form displayed on the interface with data from the database. The user may select one or more of the fields in the form and make revisions, addition, edits, etc. The user may then select the action command such as insert, review, update or delete. Commands, such as SQL commands, are generated to perform the action desired by the user on the database.
